Kishore Namburi

Senior Data & AI Architect | Analytics, Lakehouse & Agentic AI Platforms

namburik@outlook.com | +1 203-626-2874 | Plano TX | namburi.me | linkedin.com/in/tonamburi

PROFESSIONAL SUMMARY

- Enterprise Data & Analytics - 20+ years architecting data and analytics platforms for Fortune 500 organizations; 10+ years in data design roles defining standards adopted across multiple lines of business.
- Agentic AI - Open-source contributor building multi-agent semantic platform converting unstructured merchant conversations into structured, compliance-ready data, with auditable policy pipelines and hybrid graph/vector retrieval.
- Real-Time Analytics at Scale - Architected Lakehouse and Datawarehouse analytics platform processing 100M+ daily transactions (AWS EMR, Glue, Snowflake, Aurora), cutting query response times 60%.

CORE COMPETENCIES

Data & AI Architecture • Lakehouse & Real-Time Analytics • Agentic & GenAI Systems (MCP, LLM Integration) • Master Data Management (MDM) • Data Governance & Compliance • Data Modeling (Conceptual, Logical, Physical, Dimensional) • Cloud Migration Strategy • Streaming (Kafka, Spark)/CDC • Stakeholder Communication

TECHNICAL SKILLS

AI & Emerging Tech: Agentic/GenAI Systems, LLM/MCP Integration, Multi agent Orchestration, Guardrail Policies
Cloud Platforms: AWS (EMR, Glue, ECS, Lambda, S3, Athena, Aurora, Redshift, Kinesis, SageMaker, Step Functions), Snowflake, IAC, CDK/Cloud Formation, Quick Sight, SageMaker/Bedrock
Data Engineering: Apache Spark, Kafka, ETL/ELT Pipelines, Data Lakes, Parquet/Iceberg Open Table Formats, Analytics & Dashboards, MPP
Programming: Python, PySpark, Java, SQL, Unix Shell
Data Management: Data Governance, Data Quality, Reference & Master Data, Logical & Physical Erwin models.
Leadership: Technical Strategy, Team Building (25+), Budget Management ($2M+), Executive Communication

CERTIFICATIONS

AWS Certified Data Analytics – Specialty • AWS Certified Solutions Architect – Associate (SAA) • AWS Certified Database – Specialty

PROFESSIONAL EXPERIENCE

MLTek AI *Since Jul 2026*
Principal AI Architect - Paytek (paytekai.online) Remote

- Architected Paytek, a multi-agent platform automating merchant onboarding and risk profiling by converting unstructured conversations into structured, compliance-ready data.

- Designed a config-driven policy pipeline across 13 auditable policy types - threat detection, privilege elevation, and LLM-judge checks - enforcing deterministic execution for financial writes.
- Built a compliance pipeline with real-time PII redaction, role-based access control, and an append-only audit store supporting forensic and cross-session tracing.
- Architected a dynamic Text-to-SQL pattern using a LLM and an in-memory semantic layer (OpenMetadata + Cube) to eliminate static database schemas and safely compile natural language queries.
- Prototyped retrieval strategies for grounding agent responses in domain knowledge - full-context injection vs. graph-scoped semantic retrieval - and adopted an ontology with hybrid graph/vector search after measuring the relevance/context-size trade-off.

JPMorgan Chase & Co. *Aug 2024 – Jun 2026*
Vice President – Sr. Data Architect Plano, TX

- Owned the data architecture for J.P. Morgan Payments / Merchant Services, within the Commercial & Investment Bank (CIB) - including merchant accounts, platforms, and location hierarchies—by designing scalable data models and Avro schemas directly applied to data domains.
- Led target-state data platform design for the WePay merchant integration, defining platform and location hierarchies across direct, ISV, aggregator, full-liability (FLS), and no-liability (NLS) structures
- Own end-to-end architecture deliverables—including high-level designs, context diagrams, logical data models, and source-to-target mappings and providing technical oversight through implementation.
- Architected cloud-native analytics platform processing 100M+ transactions using AWS (EMR, Glue, Snowflake, Aurora), reducing query response times by 60% and improving user experience.
- Designed backend systems and orchestrated the seamless migration of 500K+ merchant customers with zero service disruption, implementing robust event reconciliation to ensure 100% data integrity.
- Embedded data governance, privacy, and security controls directly into Avro schemas and data models, ensuring strict compliance with PCI-DSS and SOC 2 standards across all merchant services domains.
- Evaluated technical options graph vs NoSQL, Change Data Capture(CDC) for a linked-table hierarchies use case; collaborated with 20+ architects enterprise-wide to plan a migration timeline.
- Pioneered Agentic AI proof-of-concepts using Model Context Protocol (MCP), automating complex merchant workflows and reducing manual processing time by 40%.

Amazon Web Services (AWS) *May 2022 – Jul 2024*
Data Architect – Data Warehouse & MPP Dallas, TX

- Served as trusted technical advisor to Fortune 500 enterprises for cloud migration engagements spanning data warehousing, MPP, and modern data and AI platforms.
- Delivered average 45% cost reduction for customers migrating from legacy systems to AWS, while improving analytics performance and ROI.
- Designed data integration frameworks enabling customers to process over 100TB+ datasets with 300% performance improvements.
- Orchestrated AWS migration pipelines and real-time streams using Step Functions, Kinesis, and Redshift; built a Snowflake Customer-360 engine that drove targeted healthcare marketing and refill outreach.
- Hands on development of production-grade ETL/ELT pipelines in Python, PySpark, and SQL supporting real-time decision systems across financial services and healthcare.

JPMorgan Chase & Co. *Oct 2020 – Apr 2022*
Big Data Engineering Lead Plano, TX

- Served as the data design lead/architect for Chase Card Services (Consumer & Community Banking) — a specialty data platform that calculates credit card rewards payouts to partners

- Architected the integration of diverse data sources—including Kafka, EBCDIC feeds, relational databases, and SaaS feeds—into a Chase Financial Data Lake to power downstream analytics and automated payout calculations.
- Owned end-to-end data modeling for data lake, partner setup, and monetary/non-monetary transaction ingestion, supporting 50+ stakeholders.
- Defined the revenue calculation engine architecture, consolidating partner-specific logic for 100+ partners into a unified, highly configurable engine.
- Designed the cloud-native modernization and defined infrastructure scaling roadmap for the entire data platform, orchestrating a low-risk migration and production cutover strategy.
- Managed compliance and legal audits for production break-fixes, deploying vendor-compliant data retention strategies across enterprise systems.

Mindtree Ltd. *Jun 2011 – Sep 2020*
Sr. Technical Manager Warren, NJ

Key Clients: American International Group (AIG) • Association of American Medical Colleges

- Served as Data/Solution Architect Lead for AIG's Property & Casualty (P&C) Reinsurance Data Platform, designing the core data model and logic to automate complex claim/premium calculations for statutory and federal regulatory reporting.
- Owned the end-to-end data architecture, establishing logical/physical models and source-to-target mappings in alignment with actuarial and compliance teams to ensure 100% data accuracy for regulatory filings.
- Designed a proprietary Customer-360 MDM platform, defining golden-record and reference-data standards using advanced data lineage to power insights that contributed to 20% revenue growth.
- Orchestrated the migration of a 10TB+ on-premises data mart to AWS, modernizing infrastructure while slashing operational costs by 40%.
- Engineered automated data validation tooling that raised data quality to 99.8% and eliminated 80% of manual validation effort.
- Directed 25+ person cross-functional teams across concurrent enterprise engagements, maintaining a 95%+ client satisfaction rating and securing $10M+ in contract renewals.

Maxim Technologies Inc. *Mar 2005 – May 2011*
Technical Lead Wilmington, DE

Key Clients: Citigroup Inc. • JPMorgan Chase & Co.

- Served as ETL Designer for the Chase Credit Card Services Data Warehouse (2005–2010), building pipelines that processed files from mainframe and transactional source systems into the enterprise data warehouse.
- Served as Data Architect for Citigroup's Receivables Information Warehouse (2010–2011), designing the Oracle data warehouse that ingested account receivables data - Lockbox, ACH, and Wires - across APAC, LATAM, North America, and Europe regions.
- Designed star schema data marts with MicroStrategy integration supporting 200+ business users with sub-second query response.

INDUSTRY EXPERIENCE

Banking & Financial Services • Healthcare & Life Sciences • Insurance & Reinsurance • Telecommunications • Merchant Services • Payment Processing

EDUCATION

Bachelor of Engineering - Andhra University College of Engineering, Visakhapatnam
